

Modified Sidus Method

Hi,

I am using the sidus method with some modifications as :

For short range ; 5 and 8 WMA, close.

For long range ; 10 and 28 EMA, close.

With 4 Hr chart. Set red colour for lowering candle and blue for raising one.

Open Position

Buy only when met with condition A or/and B:

condition A

1. Intersection of 5 WMA with 8 WMA from below.
2. Confirm with the long range (10 EMA arweady crossed 28 EMA)- tunnel
3. Emergence of blue raising candle.

Condition B

crossing of tunnel - cross of 10 EMA from below

Close position with the reverse intersection of 5 WMA with 8 , emergence of red candle
or at stop loss/take profit levels.

Follow just reverse for sell position.

Buatiful when all the long and short range intersections are coinciding.

Pl. test this strategy and feed back.
