# Roy Kelly's TrendPro 7.0™

## Introduction

**TrendPro™ indicators is not a system.** It is a method of evaluating and trading markets using mechanical buy/sell signals to trade the market and to identify cycle tops and bottoms. While judgment is not eliminated, it is greatly reduced by the methodology of combining time cycles and trend identification. Generally, buy signals are more accurate in an up trending market and less accurate in a down trending market; sell signals are more accurate in a down trending market and less accurate in a up trending market.

Determining the direction of trend requires interpretation. Trend is determined by the direction of the dominant cycle in the next longer time frame. For example, when trading a 5-minute chart, trend is determined by the cycle in the 20-minute bar chart. TrendPro™ aids in determining the trend for both time periods.

Do not expect to start using TrendPro™ indicators and immediately begin trading like a market wizard. You must become familiar with the TrendPro™ indicators and the way they, and you, interact in the markets, and the time periods you choose to trade. Like anything new, your skills will improve with experience. However, using TrendPro™ on historical back data can greatly increase your experience level very quickly. There is no substitute for putting your money on the line, but you will be much better prepared to trade if you have become thoroughly familiar with the program's methodology by applying the indicators to historical data to determine situations that present high probability buy/sell signals.

### Set Up

TrendPro™ is a powerful program that may require some assistance setting up. Please follow the set up procedures outlined in this manual before contacting technical support.

### Technical Support

If you are having any problems that prevent the program from working correctly, please call technical support at (530) 243-0999, Monday through Friday, 9:30 AM - 4:30 PM PST. For the most efficient service, we suggest you fax, or email, your questions to our technical support department and a representative will reply as soon as possible. Email address ([support@trendpro.com](mailto:support@trendpro.com)), Fax (760) 948-3027.

### TrendPro™ Workshops

Trading the markets require experience and skill. Roy Kelly personally teaches several workshops per year on trading active commodities, bonds, stocks, and intra-day trading of the S&P Index. These workshops are very specific and presented in such a way that both beginning and experienced traders leave with greatly improved trading skills and the ability to use the powerful TrendPro™ indicators and methodology. For a schedule of upcoming workshops please call ARC Systems at (530) 243-0999. Also, check our web site at: <http://trendpro.com>.

❖ **There is a risk of loss trading futures and stocks.**

## Installation

*Before you begin, make sure you have emptied your recycle bin and you have closed all programs.*

- 1) Insert the CD in your computer CD drive, the files should automatically install.
- 2) If you have any problems, and the CD does not install the files on it's own, go to Windows Desk Top, Start, Run, and type in your CD drive location. Example:  
D:\TrendProSetup.exe
- 3) If you have received the files via e-mail, burn .exe file and the autorun.inf file into a CD and follow step 1 or 2. or install files into a floppy drive and extract from there. Make sure that the autorun.inf file is included.

## TrendPro™ Indicators

The TrendPro 7.0™ version comes with four indicators – TrendPro Up, TrendPro Down, TrendPro Stops, and TrendPro Trigger Points. TrendPro™ indicators are universal and can be used in all markets and time periods; bonds, metals, agricultural commodities, currencies, mutual funds, stocks and foreign markets. They work very well trading the S&P Index intra-day. These indicators were designed with the best dynamic technology available for all markets.

**TrendPro Up & TrendPro Down** show market direction. When the market changes direction or stays in an upward trend the bars are colored *blue* and remain *blue*. When the market changes direction to a downward trend the bars are colored *red* and remain *red*. If there is a sideways market or the market has no direction then the bars turn the default color of the price bar setting.

**TrendPro Stops** include two kinds of stops, one for an up trend and one for a downward trend. The price of the dots is the protective stop. TrendPro Stops will change along with the market helping to lock in profits. The markets own price movements determine the stop loss prices. These are the same stops that come with our TrendPro software.

**TrendPro Trigger Points** act systematically by providing mechanical entry points. This indicator pinpoints buy or sell signals according to the proven logic of these indicators. When there is a buy or sell condition this indicator colors a big blue dot for a buy and a big red dot for a sell.

**Note:** It is best, as with any trading method, to enter trades in the direction of the major trend. It would be prudent to enter a trade with this indicator after a confirmed cycle high or cycle low.

## Tips & Techniques

To see TrendPro Up, TrendPro Down, and TrendPro Trigger Points, attach the Expert Advisor named “TrendPro” to your chart. To see the TrendPro Stops, plot the custom formula “TrendPro Stops” in your chart.

### **TrendPro Up**

TrendPro Up is best seen by attaching the Expert named “TrendPro” to your chart. When TrendPro Up is true, the bars will be highlighted Blue. There is also a TrendPro Up custom formula that returns 1 for true and 0 for false, although it’s unlikely you will need to plot this.

❖ <b>Inputs</b>	<b>Default</b>	<b>Description</b>
Strength	3	Recommend using the default setting; however, for experimentation purposes decrease/increase this value between 1-10.
Range	0.90	Simply a filter of the strength setting to determine whether or not the bar turns blue. Recommend using the default setting; however, for experimentation purposes the range is between 0 - 3.90.

## Tips & Techniques

### **TrendPro Down**

TrendPro Down is best seen by attaching the Expert named “TrendPro” to your chart. When TrendPro Down is true, the bars will be highlighted Red. There is also a TrendPro Down custom formula that returns 1 for true and 0 for false, although it’s unlikely you will need to plot this.

❖ <b>Inputs</b>	<b>Default</b>	<b>Description</b>
Strength	3	Recommend using the default setting, however, for experimentation purposes decrease/increase this value between 1-10.
Range	0.90	Simply a filter of the strength setting to determine whether or not the bar turns blue. Recommend using the default setting, however, for experimentation purposes the range is between 0 - 3.90.

## Tips & Techniques

### TrendPro Stops

To plot TrendPro Stops, choose Insert | Indicators from the menu bar, and insert the custom formula “TrendPro Stops”. To change the price style to dots, select the indicator with the mouse, then choose Format | Selected Object from the menu bar. Choose the Color/Style tab, then change the Style to dots.

❖ Inputs	Default	Description
Strength	3	Recommend using default; however for experimentation purposes decrease/increase this value between 1-10.

## Tips & Techniques

The TrendPro Expert includes Alerts for the TrendPro Trigger Points.

### TrendPro Trigger Points

❖ Inputs	Default	Description
Strength	3	Recommend using default; however for experimentation purposes decrease/increase this value between 1-10.
Method	1	When set to 1, it will show the buy and sell signal. When set to 2, it will show only the buy stops. Set to 3, it will show only the sell stops.
